

Project Design Phase-I Solution Architecture

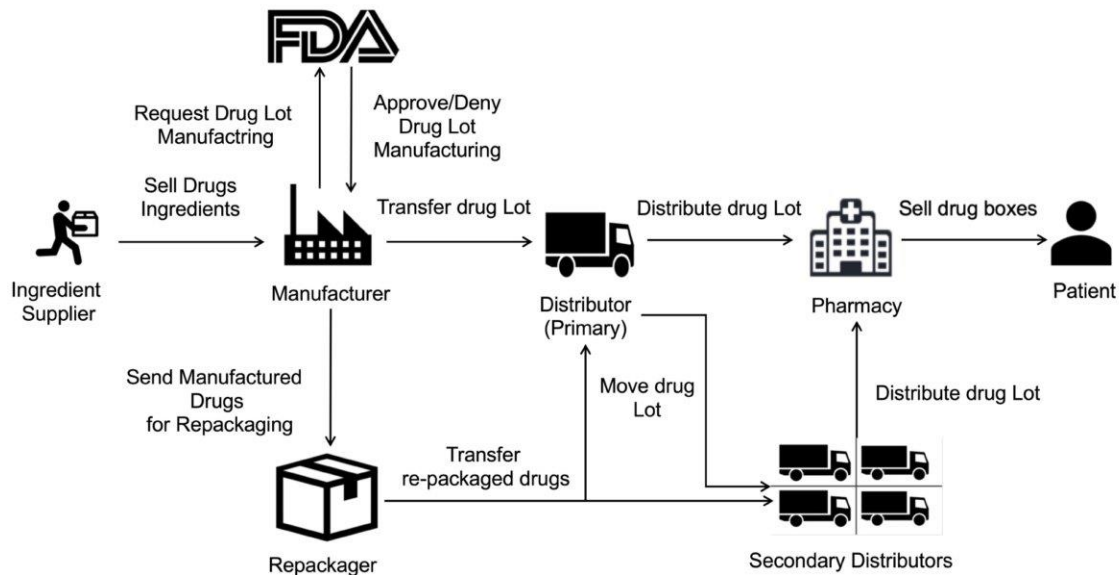

Date	26 October 2023
Team ID	NM2023TMID03791
Project Name	Project- DRUG TRACEABILITY
Maximum marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

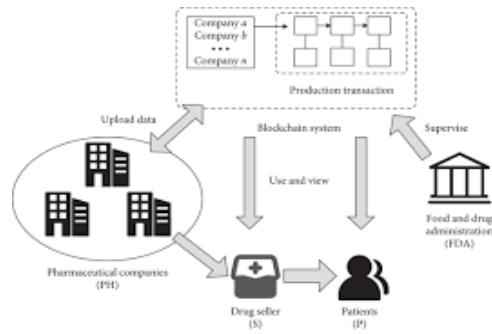

Figure 1: Drug Traceability System Based On Blockchain System
